

THE VINTAGE STYLE COLLECTION *2017*

BY **3[■]rock**

Seeing the beauty in a piece of wood, the texture of raw metal or the potential in industrial objects, our team of designers and crafts people aim to combine form and function with a unique aesthetic.

3:rock has developed a range of products to meet a growing desire for stylish hand finished pieces.

Using a variety of materials and finishing techniques our new range demonstrates the innate beauty of everyday objects or materials.

All of our products can also be specifically tailored to suit specific requirements and our design team would be more than happy to help deliver something truly bespoke.

Angle

A combination of industrial crafts combining to create a distinct piece. Our work is all hand finished and coated to your desire, whether it is raw unfinished, clear coated or stained, our crafts people put time and skill into each distinct piece ensuring it is enjoyed for a long time.

Available in various sizes to suit, the “Angle” style table makes a wonderful center piece to a retail display, coffee table or office furniture.

A photograph of a rustic wooden table with a dark metal frame. The table is made of thick, weathered wooden planks and stands on a simple, dark metal frame. It is positioned against a dark grey brick wall on a light-colored concrete floor.

Scaff

Natural age and wear leaves a distinct impression on materials. With our “Scaff” range of tables and shelves we don't try to hide every nick bump or bruise but rather use them to create unique bespoke pieces.

Available in 2.4m long and built to your desired width and height, these make very functional tables, desks and displays.

A variety of leg styles and finishes are available.

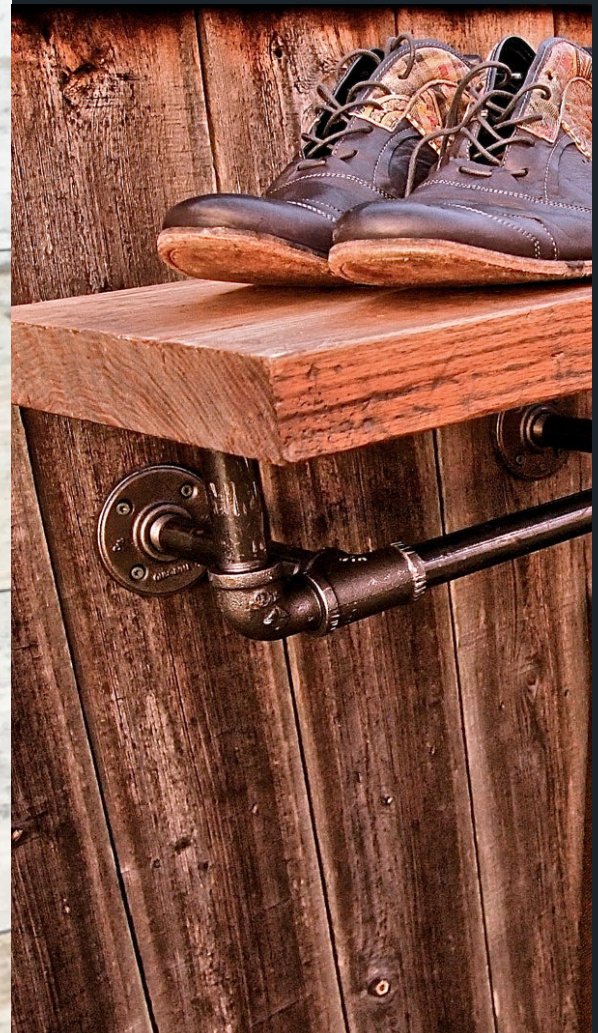

Pipe

The solid cold feeling of the freshly threaded gun barrel piping mixed with beautifully treated timber can set mood and tone and be center pieces in there own right.

Useful for clothes rails, furniture legs, shelving, toiletries and lighting.

Our pipe range is a product line that is constantly evolving as the materials lend itself to multiple applications.

Our design team can work with you to bring your project to life.
